

BizzNEST Linktree Assessment Write-Up

Project: Jason Tello personal landing page

Live site: <https://jasontello.github.io/bizznest-linktree-assessment/>

Repository: <https://github.com/jasontello/bizznest-linktree-assessment>

Overview

This project is a polished Linktree-style personal page built with Vite, React, and plain CSS. It presents Jason Tello's profile, portfolio, LinkedIn, resume, and GitHub links in a responsive landing page.

Custom Feature

The custom feature is a layout toggle that switches between a classic list view and a visual bento-grid view. The feature keeps the same link data while offering two presentation modes: a familiar Linktree layout and a more editorial, portfolio-style grid.

Design Approach

The visual direction uses strong typography, bold color blocks, rounded shapes, and a minimal interface. The page includes light and dark themes, responsive behavior, accessible buttons, and clear link states.

Technical Notes

The app is component-based, with link data stored in `src/data/links.js` so content can be updated easily. GitHub Pages deployment is configured through Vite's base path and the `gh-pages` package.

Testing Checklist

The project was checked for production build success, deployed asset paths, live GitHub Pages loading, profile image loading, link behavior, list/grid toggle behavior, theme switching, and mobile layout stability.
